Author Index

Abdulmuin, M. Z.	Indirect injection diesel engine operation on palm oil methyl esters and its emulsions	291–299
Abu-Qudais, M.	Experimental and theoretical study of particulate re-entrainment from the combustion chamber walls of a diesel engine	49–57
Arcoumanis, C.	Optimizing local charge stratification in a lean-burn spark ignition engine	145–154
Bass, C. R.	A system for simulating structural intrusion in automobile full-frontal and frontal-offset crashes in the laboratory sled test environment	325–336
Bassett, M. D.	A simple two-state late intake valve closing mechanism	237–241
Blakey, S. C.	A simple two-state late intake valve closing mechanism	237–241
Blaszczyk, J.	A comparative study of the performance and exhaust emissions of a spark ignition engine fuelled by natural gas and gasoline	39–47
Botsaris, P.	Three-way catalyst assessment via outlet–inlet temperature measurements: driving tests	445–454
Bryson, R. A.	Can increasing expenditure on research and development really be justified?	87–96
Bulman, D. N.	An experimental and theoretical investigation into the design of an active suspension system for a racing car	161–173
Cafferty, S.	Characterization of automotive dampers using higher order frequency response functions	181–203
Cebon, D.	Indirect methods for assessing road friendliness of lorry suspensions	243–256
Cebon, D.	Assessing 'road-friendliness': a review	455–475
Chan, S. H.	Divergence analysis of an emissions-based air–fuel ratio model and exhaust oxygen estimation	137–144
Checkel, M. D.	The importance of turbulence intensity, eddy size and flame size in spark ignited, premixed flame growth	83–86
Chen, C. C.	Dynamic performance simulation of a continuously variable transmission motorcycle for fuzzy autopilot design	477–490
Cheng, W.	Analytical efficiency comparison between gas turbine and gas turbine hybrid engines for passenger cars	113–119
Childs, T. H. C.	The meshing of timing belt teeth in pulley grooves	205–218
Cole, D. J.	Indirect methods for assessing road friendliness of lorry suspensions	243–256
Cole, D. J.	Assessing 'road-friendliness': a review	455–475
Craighead, I. A.	Sensing tyre pressure, damper condition and wheel balance from vibration measurements	257–265
Crandall, J. R.	A system for simulating structural intrusion in automobile full-frontal and frontal-offset crashes in the laboratory sled test environment	325–336
Dalgarno, K. W.	The meshing of timing belt teeth in pulley grooves	205–218
Darkwa, K.	Mathematical modelling of a thermochemical energy store: automobile application	337–346
Darkwa, K.	Experimental studies of a thermochemical store for automobile engines	347–360
Darling, J.	A theoretical investigation of a prototype active roll control system	3–12
Das, A.	Development of a natural gas spark ignition engine for optimum performance	361–378
Davies, G. M.	Precoated steels development for the automotive industry	319–324
Day, A. J.	The meshing of timing belt teeth in pulley grooves	205–218
Dekel, E.	A system for simulating structural intrusion in automobile full-frontal and frontal-offset crashes in the laboratory sled test environment	325–336
Dominy, R. G.	Fuel saving by the optimized use of cab roof fairings for typical articulated vehicle operating cycles	219–226
Durst, F.	Characteristics of scavenging flow in transfer ports of a motored two-stroke engine	301–317
Duym, S.	An alternative force state map for shock absorbers	175–179
Evans, R. L.	A comparative study of the performance and exhaust emissions of a spark ignition engine fuelled by natural gas and gasoline	39–47
Fijalkowsky, S.	Operation of exhaust systems of turbocharged diesel engines identified by means of exergy analysis	391–406
Foss, P. W.	A simple two-state late intake valve closing mechanism	237–241
Gros, X. E.	Detection of delamination in tyres using eddy currents	79–82
Haji-Sulaiman, M. Z.	An investigation of the relationship between used engine oil properties and simulated intake valve deposits	379–389
Hill, M.	A rule-based technique for two-state switchable suspension dampers	13–20
Hojjati, M. H.	The meshing of timing belt teeth in pulley grooves	205–218

Hong, C. W.	Dynamic performance simulation of a continuously variable transmission motorcycle for fuzzy autopilot design	477–490
Hsu, J.-C.	Vision-based motion measurement by directly extracting image features for vehicular steering control	277–289
Hull, D. R.	Optimizing local charge stratification in a lean-burn spark ignition engine	145–154
Inoue, M.	Simultaneous reduction of particulate matter and NO_x in a diesel engine by compressed gas injection: macroscopic study at residual load	227–236
Isa, F. M.	An investigation of the relationship between used engine oil properties and simulated intake valve deposits	379–389
Jordan, A.	A system for simulating structural intrusion in automobile full-frontal and frontal-offset crashes in the laboratory sled test environment	325–336
Karkanis, A.	Three-way catalyst assessment via outlet–inlet temperature measurements: driving tests	445–454
Kauh, S. K.	Measurement of air flowrate by using an integration type ultrasonic flow meter applicable for spark ignition engine control	129–135
Kauh, S. K.	Modulated fuel feedback control of a fuel injection engine using a switch type oxygen sensor	491–497
Kawai, D.	Simultaneous reduction of particulate matter and NO_x in a diesel engine by compressed gas injection: macroscopic study at residual load	227–236
Kim, J.	Measurement of air flowrate by using an integration type ultrasonic flow meter applicable for spark ignition engine control	129–135
Kim, J. J.	Shape design of an engine mount by a method of parametric shape optimization	155–159
Kim, H. Y.	Shape design of an engine mount by a method of parametric shape optimization	155–159
Kittelson, D. B.	Experimental and theoretical study of particulate re-entrainment from the combustion chamber walls of a diesel engine	49–57
Koltsakis, G. C.	Computer aided assessment and optimization of catalyst fast light-off techniques	21–37
Konstantinidis, P. A.	Computer aided assessment and optimization of catalyst fast light-off techniques	21–37
Ladommatos, N.	Engine performance monitoring using spark plug voltage analysis	499–509
Lea, C. J.	Differential stress modelling of turbulent flows in model reciprocating engines	59–77
Lee, J.	Measurement of air flowrate by using an integration type ultrasonic flow meter applicable for spark ignition engine control	129–135
Lin, R.-H.	Vision-based motion measurement by directly extracting image features for vehicular steering control	277–289
Lu, J.	Modulated fuel feedback control of a fuel injection engine using a switch type oxygen sensor	491–497
Marsden, P.	Drive-by-wire systems: some reflections on the trend to automate the driver role	267–276
Masjuki, H.	Indirect injection diesel engine operation on palm oil methyl esters and its emulsions	291–299
Matthews, A. E.	Precoated steels development for the automotive industry	319–324
Melling, A.	Characteristics of scavenging flow in transfer ports of a motored two-stroke engine	301–317
Mkilaha, I. S. N.	Simultaneous reduction of particulate matter and NO_x in a diesel engine by compressed gas injection: macroscopic study at residual load	227–236
Nakonieczny, K.	Operation of exhaust systems of turbocharged diesel engines identified by means of exergy analysis	391–406
Naruse, I.	Simultaneous reduction of particulate matter and NO_x in a diesel engine by compressed gas injection: macroscopic study at residual load	227–236
O'Callaghan, P. W.	Mathematical modelling of a thermochemical energy store: automobile application	337–346
Ohtake, K.	Simultaneous reduction of particulate matter and NO_x in a diesel engine by compressed gas injection: macroscopic study at residual load	227–236
Organ, A. J.	Analysis of the gas turbine rotary generator	97–111
Park, K.	Measurement of air flowrate by using an integration type ultrasonic flow meter applicable for spark ignition engine control	129–135
Park, K. S.	Modulated fuel feedback control of a fuel injection engine using a switch type oxygen sensor	491–497
Park, J.	Modulated fuel feedback control of a fuel injection engine using a switch type oxygen sensor	491–497
Pfahnl, A. C.	Analytical efficiency comparison between gas turbine and gas turbine hybrid engines for passenger cars	113–119
Pilkey, W. D.	A system for simulating structural intrusion in automobile full-frontal and frontal-offset crashes in the laboratory sled test environment	325–336
Potter, T. E. C.	Indirect methods for assessing road friendliness of lorry suspensions	243–256
Potter, T. E. C.	Assessing 'road-friendliness': a review	455–475
Purdy, D. J.	An experimental and theoretical investigation into the design of an active suspension system for a racing car	161–173
Ro, S. T.	Measurement of air flowrate by using an integration type ultrasonic flow meter applicable for spark ignition engine control	129–135
Ro, S. T.	Modulated fuel feedback control of a fuel injection engine using a switch type oxygen sensor	491–497
